SQL CASE STUDY

Analyzing Starbucks Employee Data Using SQL

1. Understanding Employee Demographics:

Analyze the composition of the workforce, including age, gender, and tenure, to understand Starbucks's diversity and inclusion efforts.

2. Workforce Distribution:

Examine how Starbucks distributes employees across various roles, locations, and departments.

By Shefali Datrange

Display all data from the Department table for the Sales department

```
3 •   SELECT * FROM hr.departments
4     WHERE department_name= "sales";
5
```

Result Grid | Filter Rows: | Edit:

department_id	department_name	manager_id	location_id
80	Sales	145	2500
NULL	NULL	NULL	NULL

Display the first name concatenated with last name, hire date, commission percentage, telephone, and salary for all employees whose salary exceeds 10000 or the third digit in their phone number equals 5. Sort the query in descending order by the first name

```
5  use hr;
6
7  Select concat(first_name," ",last_name) as "name", hire_date, commission_pct, salary, phone_number
8  FROM employees
9  WHERE salary >=10000 or substring(phone_number, 3, 1)= "5"
10 ORDER BY name DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

name	hire_date	commission_pct	salary	phone_number
Susan Mavris	1994-06-07	NULL	6500.00	515.123.7777
